

## Original

## Determining Shapes

## Steps:

### Make the head

1. Put together a big sphere with a smaller sphere. Elongate the smaller one to be more oval. Align and group.
2. Add a nose sphere, elongated to be more oval. Align and group.
3. Add small eye spheres. Group.

4. Make 2 half spheres into the correct size for ears. Turn them to fit the head. Group all. Put the head aside on the workspace.

### Make the body

5. Put together a parabola and a sphere. Elongate the sphere into an oval. You might need to work on sizing these so they line up well. Align and group. Put aside on workspace.

### Make the legs

6. Add a parabola and half sphere together. Align and group.

### Putting it together

7. Add the leg to the body first. It helps to make the body a hole while trying to size the leg. You may need to play with correct sizing for the legs so they fit the body. Once you have the correct size, copy and paste 3 additional legs and place them. Group all. Add the head. Group all.

## Final Product
